EDUCATION

UC Berkeley Aug 2021 - May 2025

B.S., Electrical Engineering and Computer Science

TECHNICAL SKILLS

Frontend: JavaScript, React.js, HTML5 / CSS, Bootstrap

Backend & Databases: Python, Node.js, Express.js, PostgreSQL

Developer Tools: Git / GitHub, Vite

EXPERIENCE

Software Engineering Intern, *LA-Tech.org* Feb 2026 - May 2026

- Built a React web application that enables users to search and analyze App Store data
- Integrated iTunes Search API with React frontend to enable real-time app search and review data analysis
- Designed responsive React Bootstrap dashboards to visualize app metadata and review analytics
- Implemented concurrent Python threads to fetch and batch iTunes review data in parallel, reducing data retrieval time
- Developed Python logic to analyze review volume and trends across date ranges

Data Science Intern, *POiN* Jun 2025 - Aug 2025

- Analyzed regional user trends to evaluate business growth opportunities and market potential
- Built Python scripts to clean 4k+ data points and generate trend visualization charts
- Used Pandas to clean and standardize inconsistent data types and improperly formatted user records
- Identified data collection gaps and improved parsing logic to increase quality and rating accuracy

PROJECTS

File Sharing System Mar 2025

- Developed a secure backend in Go that uses digital signatures to detect and prevent data tampering
- Built security tests that simulated attack scenarios to validate data integrity and identify vulnerabilities
- Ranked in the top 10% of the class by passing rigorous backend security evaluations

Action Map Oct 2024

- Collaborated with a four-person team to develop a civic-tech application for locating elected representatives by address
- Refactored legacy Ruby on Rails code to repair a broken representative location-search function
- Integrated a News API for users to track issues and view live, relevant articles
- Expanded RSpec and Cucumber test coverage by 20%
